

MEM with Earle's Salts and L-glutamine

Catalog No. M6211

Description

Minimum Essential Medium (MEM) was developed by Harry Eagle and has become one of the most widely used of all synthetic cell culture media. The original formulation, containing Earle's Balanced Salts, was designed for use in propagating mouse L cells and HeLa cells. Eagle found that these cells require 13 amino acids and seven vitamins to grow and reproduce in vitro. MEM with Earle's Balanced Salts is suitable for cell culture in CO₂ charged atmospheres, while MEM with Hank's Salts is suitable for cell culture in normal atmospheric conditions.

D-glucose	1000mg/L
L-Glutamine	292mg/L

Storage Condition

Store the basal medium at 2-8°C. Store cell growth supplement, fetal bovine serum (FBS) and antibiotics at -20°C. The complete cell culture medium with Supplement Kit can be kept in 4°C for two months. Protect from light.

To assure sterility, the prepared medium should be filtered with a 0.2 um filter after 2 weeks or if there is concern that sterility was compromised during the supplementation process.

Shipping

Ice pack.

Authorized Uses of *Cell Biologics* Products

Cell Medium from *Cell Biologics* are distributed for internal *in vitro* research purposes only. Our products are not authorized for human use, for *in vitro* diagnostic procedures, or for therapeutic procedures. Transfer or resale of any *Cell Biologics'* cells or products from the purchaser to other markets, organizations or individuals is prohibited by *Cell Biologics*, without the company's written consent. *Cell Biologics'* Terms and Conditions must be accepted before submitting an order.
