

**Medium 199 With Hank's Salts; With L-glutamine and HEPES Buffer**

Catalog No. M6219

**Description**

In an effort to produce a totally defined nutritinal source for cells, Morgan, Morton, and Parker, in 1950, developed what has become known as Medium 199. It was found that the growth of explanted tissue could be measured in Medium 199. However, long-term cultivation of cells required serum supplement. Currently, it is widely used in virology and vaccine production. It is also used in the culture of many non-transformed cells.

**Storage Condition**

Store the basal medium at 2-8°C. Store cell growth supplement, fetal bovine serum (FBS) and antibiotics at -20°C. The complete cell culture medium with Supplement Kit can be kept in 4°C for two months. Protect from light.

To assure sterility, the prepared medium should be filtered with a 0.2 um filter after 2 weeks or if there is concern that sterility was compromised during the supplementation process.

**Shipping**

Ice pack.

**Authorized Uses of *Cell Biologics* Products**

Cell Medium from *Cell Biologics* are distributed for internal *in vitro* research purposes only. Our products are not authorized for human use, for *in vitro* diagnostic procedures, or for therapeutic procedures. Transfer or resale of any *Cell Biologics*' cells or products from the purchaser to other markets, organizations or individuals is prohibited by *Cell Biologics*, without the company's written consent. *Cell Biologics*' Terms and Conditions must be accepted before submitting an order.
